2011

Building Use

Community Centre

Nominated for the LABC award for best community building, the Park Lane, centre in Telford is a multi use community building designed to hold conferences, exhibitions and a medical centre.

- In 2009, we were contact by McPhillips in regards to the production of granite benches, kerbs and spheres for the outdoor areas.
- The material specified by the designers was our Arctic Grey Flamed Granite.
- Each sphere was 1m in height.
- Our in house CAD technicians designed each segment of the benches and kerbs for our partner factory in China to produce.
- Although we have our own quality control agents within the factory a team flew out part way through production to ensure that work was being carried out to specification.
- The project was completed in 2011.
